

Page number: 01

Composition Mixture of pigments, fillers and zincphosphate in solution of high solid epoxy resin in organic solvents with addition of iron mica.

Characteristics and use The paint is determined for anticorrosive primers of steel and light metals (aluminium) or for undercoats (interlayer) for environment with medium and high corrosive stress. Due to its low solvent content, it is tolerant to most old paint systems and is therefore also suitable for repair coatings. Before use the paint is mixed properly with the hardener in specified ratio.

- ◆ excellent adhesion to steel and aluminium surfaces
- ◆ tolerant to worse surface preparation
- ◆ excellent anticorrosive properties
- ◆ because of low content of solvents suitable for repainting of old coats
- ◆ during the curing process minimum change of the volume
- ◆ TELPOX PM150 is suitable for **direct** food contact (selected shades)
- ◆ suitable for the tinting system HOSTEMIX

Application area Exterior and interior with medium and high corrosive stress, e.g. production halls, chemical plants, machines and equipment, piping, transport containers, boxpalletes, metal and steel structures, etc.

Shades 0110 - grey (only for airless application) and the others according to individual customer requirements.

|---------------------------------|-------------------------------|--------------------|
| Properties of cured coat | Hiding power | degree 1 - 2 |
| | Gloss / 60° | ca 80 |
| | Pendulum hardness / Persoz | up 15 % after 24 h |
| | Adhesion with crosshatch test | degree 0 |

| | | | | |
|--------------------|------------------------|-------|-------|--------|
| Drying time | Surface temperature | 10 °C | 23 °C | 23 °C |
| | Dust free | 16 h | 4 h | 5 h |
| | Dry through | 48 h | 5 h | 7 h |
| | Dry film thickness DFT | 80 µm | 80 µm | 240 µm |

| | | | |
|---------------------------|--------------------------------|----------------------|----------------------|
| Spreading capacity | Wet film thickness WFT | 105 µm | 210 µm |
| | Dry film thickness DFT | 80 µm | 160 µm |
| | Theoretical spreading capacity | 6 m ² /kg | 3 m ² /kg |

Thinning TELSOL POX, BALTECH S6300, to thin after hardening.

Hardening Hardener: TELHARD POX F

| | Weight mixing ratio (primer : hardener) | Volume mixing ratio (primer : hardener) |
|----------------|---|---|
| TE LHARD POX F | 100 : 12 | 100 : 20 |

The pot life of the hardened mixture is 1 hour (20 °C).

Thermal resistance Thermal resistance of the cured coat: up to 120 °C: without restrictions, the hardness of the coating film gradually increases during long-term loading and the flexibility decreases. At temperatures of 120 °C to 150 °C, visual changes, gradual increase in hardness, decrease in flexibility and embrittlement of the coating film may occur.

Surface preparation For corrosive environment C3, C4 and C5 the steel surface must be prepared by blast-cleaning to degree Sa 2 ½ according to EN ISO 8501-1 (welds and edges must be finished according to EN ISO 8501-3). Aluminous surfaces must be treated according to EN ISO 12944-4, čl. 12.1. and 12.2. It is necessary to clean, degrease and remove poorly adhering old coats from previously painted surfaces.

Application conditions Stir the paint properly with a mechanical stirrer before use so that there will be no sediment on the bottom and harden. To thin and filter if it necessary. The temperature of the paint itself should be 15-25 °C. If the paint temperature is below 15 °C, a higher dilution is required and this can subsequently cause problems with the formation of a homogeneous paint film and a longer drying time.

For coating / spraying outside the suitable weather forecast is necessary. During rain, fog, creation of condensation water, effect of aggressive gases and during wind with strong content of dust the coating work must be suspended and can be restart after absolute drying of surface-treated material. Minimal air temperature for application is 10 °C, temperature of painted surface must be 3 °C above dew point. Temperature and relative humidity must be measured in proximity of painted surface. The surface temperature must not be higher than 40 °C. Relative humidity must not be higher than 75 %. Lower temperature and higher humidity during an application and a drying and high thickness of applied coats markedly slow down drying and hardening of the coat. Imperfectly dried surface can cause problems with adhesion of paint to surface or with adhesion between individual coats. In addition it can negatively affect overall appearance of the paint film.

Workflow

1. Apply 1 coat of two-component epoxy primer TELPOX PM150, optimal dry film thickness of one coat is 80 – 120 µm. Drying of one coat at least 5 hours (20 °C);
2. Local bonding with polyester putty (e.g. Rapid). Sanding of bonded places;
3. Sanding with sandpaper no. 280-320;
4. Apply 1coat of two-component polyurethane single coat TELPUR S210, optimal dry film thickness is 80 µm or apply 1 or 2 coats of two-component polyurethane enamel TELPUR T330 HS, optimal dry film thickness of one coat is 60 - 80 µm, recoating is possible by the system so-called "wet into wet".

The paint is applied by cross spraying or in parallel strips to achieve a final uniform layer. First it is necessary to treat problematic places (corners, edges, welds, surface defects).

It is very important to apply each coat in a uniform layer, in a thickness specified by the specific paint system. Consumption of paint must be checked to avoid excessive thickness, to avoid splashing, cracking and solvent retention.

Optimal thickness of system The optimal thickness and composition of the paint system depends on the aggressivity of atmosphere and on the expected durability of a protective system. The selection of an appropriate system should be in accordance with EN ISO 12944-5: 2018.

Application Airless/AirMix spraying (0 – 10 % thinning)
Brush (recommended viscosity 60-80 s / cup Ford Ø 4 mm; max.10 % thinning)
Application by brush is recommended only for small areas and for corrections.

Application data

Data for airless spraying Airless/AirMix (tested on the device EcoPump VP 55 445, 64:1 gear ratio, in combination with air assist spraying gun EcoGun 2100 (DÜRR))

| Device | Nozzle | Pressure on nozzle | Thinning |
|---------|----------------------|---|----------|
| AirMix | 0.013 inch (0.33 mm) | 15-25 Mpa (150-250 atm) air assist 2.0-2.5 atm | 0-10 % |
| AirMix | 0.015 inch (0.38 mm) | 15-25 Mpa (150-250 atm) air assist 2.0-2.5 atm | 0-10 % |
| Airless | 0.013 inch (0.33 mm) | 20-25 Mpa (200-250 atm) | 0-10 % |
| Airless | 0.015 inch (0.38 mm) | 20-25 Mpa (200-250 atm) | 0-10 % |

Recommended filter of spraying gun yellow 100/149 (mesh/ μm), spraying angel 20 – 60°. It is not recommended using free adjustable nozzle.

We recommend using a powerful pneumatic device with a higher gear ratio of at least 56:1.

Handling

Read the instructions in the Safety Data Sheet before use and follow all safety instructions and regulations. The product contains organic solvents. Follow basic hygiene rules. Do not eat, drink or smoke while using this product. Avoid contact with eyes, skin or clothing. Wear protective gloves, eye protection, protective clothing. Ensure effective ventilation of the workplace.

Packing

25 kg (tinted, not hardened product)

Storability

The product keeps the product qualities 24 months from production date in original closed container. To store in dry storage at the temperature 5 to 25 °C. Flammable liquid II. hazard class.

Disposal of packing and waste

Hand over the used, properly empty packing at the collection point of the packing waste. Dispose the packing with the product rest at the place determined by the town for disposal of hazardous waste or hand over to the person authorized for hazardous waste disposal. Further see the product safety data sheet.

These data are only for information and their accuracy is influenced by the properties of individual materials and unpredictable factors during application. The user is responsible for correct use of the product according to the direction for use and for correct application of painting system, i.e. he must always evaluate all conditions of application, which could influence final quality of the top treatment. Therefore, we always recommend to the user to carry out the test for actual working conditions and type of surface applied. Above mentioned data are data, which influence individual working conditions and therefore they do not establish a legal claim. It is necessary to consult information outside the terms of this catalogue sheet with the producer.

The producer stipulates the right for the change in the catalogue sheets without previous notification.
